

PHOTOVOLTAIC MODULE IS75P - IS90P

The **new** photovoltaic modules **IS75P - 75Wp** and **IS90P - 90Wp** are composed of **36** high efficiency monocrystalline solar cells 125x125mm produced with the most innovative technologies of isotropic texturization and antireflecting coating.

Istar Solar® manufactures top quality modules by using only guaranteed and certified materials.

These modules are in fact made of solar cells encapsulated between sheets of ethylene vinyl acetate (EVA), highly transparent, antishock, tempered glass which protects the module against mechanical and climatic effects, such as hail, ice etc.

The particular texturization of the glass enables a maximum concentration and diffusion of the light on the solar cells. This enable us to guarantee very good module performances, power and working conditions even if in lower sunlight levels worldwide.

The white tedlar back sheet contributes to a further protection of the module and the electrical contacts against the action of climatic agents like humidity.

Furthermore the **strong anodized aluminium frame** with corners and pre-drilled mounting holes makes the module extremely easy to install.

The modules are equipped with a special waterproof **junction box Tyco** with protection degree **IP55**, with two connetvor plugs and two by-pass diods wich protect the module against hot spot effects.
